Carbonite™ Server Backup Appliances

Save time and money with integrated appliances

Benefits

Carbonite Server Backup Appliances

- Simple, all-in-one appliance that's easy to setup and use
- Efficient and reliable data protection ensures rapid local recovery
- Easily scales to accommodate data growth without large capital expenditures

Carbonite Server Backup

- Single vendor to handle your software, hardware and support needs
- Achieve business continuity with hourly and forever incremental backups with flexible retention options
- Flexible recovery options including rapid local failover and granular restore of files, folders and application data
- Expansive platform support—over 200 OS versions, applications and platforms

Buying your own components and creating your own backup and recovery solution can be confusing, costly and time-consuming. For an easier path to advanced data protection, deploy a purpose-built appliance that's an all-in-one backup and recovery appliance with preconfigured hardware, software and storage.

Pair a appliance with Server Backup technology for complete data protection for your business systems. Server Backup supports more than 200 operating systems, platforms and applications – including physical, virtual and legacy systems.

Save time and money

With a single all-in-one solution

Our integrated appliances work seamlessly with Server Backup to cover all your data protection needs. Save time, money and effort by using a single solution. You'll eliminate the need for duplicate vendors and multiple installation periods alongside having to manage multiple components and updates.

With retention and reporting

Reports provide fast, centralized and accurate information about your backup and recovery process. Best-practice retentions (30 dailies and 11 monthlies) are standard and custom retention is available.

With world-class 24/7 support

Our professional services teams can help you design, test and execute your data protection strategy.

Complete, integrated protection

- Appliances are available to purchase worldwide, with up to 150 TB of storage
- Our Hardware as a Service (HWaaS) model available in North America, Australia, and New Zealand is perfect for customers needing to eliminate capital expenditures and scale up to 45TB
  - Our smallest HWaaS offering offers plug and play technology that scales with your business from .5TB to 2TB without the need to swap hardware
- Our software-only options give you the flexibility to choose any of our appliances based on your storage needs

How it works

Our Solution centralizes the backup and recovery of data on servers distributed throughout your organization, as well as remote and branch office locations. We automatically back up data to your appliance target. We offer flexible recovery options including full server and granular restore. Reports provide details about the status of your backups. AES-256 encryption keeps your data secure throughout. All appliance configurations protect a wide range of platforms and applications.
