

Windows 10 EOL: Be ready now

Windows 10 support ends October 2025

Unsupported devices Security, compliance, and insurance risks

Stay protected and compliant

01 Understand the risk

Windows 10 EOL will mean no more technical or security updates after Oct. 14. Unsupported devices become easy targets for cyberattacks, putting customer data, compliance, and insurance at risk.

02 Meet compliance and insurance requirements

Cyber insurers often demand proof of up-to-date systems and reliable backups. Without a plan, you may lose coverage or fail audits.

03 Use backup as part of the solution

Endpoint backup protects critical data, even on aging devices. It's the fastest, easiest way to meet compliance and stay insured.

04 Win business, save time

Provide an affordable, low-touch backup plan to keep your data secure, without adding resource strain.
